

ILLUSTRATING WHY  
***BIOWASH SOIL AMENDMENT***  
**Stimulates such rapid nutrient absorption & plant growth**

Roelf Havinga, Organic Supplier, The Netherlands was curious regarding the nearly immediate visible growth when tulip growers added BioWash to fertilizers. Roelf tested it with red dye. He placed tulip bulbs in a tank of water, added red dye and photographed the before and after results.

**Before adding red dye**

**Tulips 20 minutes after adding red dye: No visible penetration**

**Tulips 15 minutes after adding red dye together with BioWash Soil Mend**

**This illustrates how BioWash so dramatically increases the efficacy of nutrients.**

Reportedly, BioWash also increases moisture, atmospheric nitrogen & oxygen absorption.

BioWash works on all plants.

***BioWash is not a cost. BioWash is an essential farm investment.***

Genotoxicity Free & Suitable for Organic Farming
